Emily Braley
MERC Coordinator
Maine Technology Institute
8 Venture Avenue
Brunswick, ME 04011

Dear Emily,

I wholeheartedly recommend Lisa Van Dyk as a Maine Entrepreneurial Resource Corps (MERC) consultant. Having worked closely with Lisa, I can attest to her invaluable contributions to Radiolife's grant writing endeavors. She will be a great asset for other small businesses and startups in Maine.

Radiolife is disrupting the medical diagnostics industry with our innovative solution, Cube Scan, that combines radio frequency signature patterns with advanced artificial intelligence modeling to detect biomarkers and pathogens in patient samples. We participated in the 2023 cohort of the Roux Institute's Future of Healthcare Founder Residency and were connected with Lisa as an external resource when we had a grant writing need. We have continued to collaborate with her as we develop a National Science Foundation SBIR proposal.

Non-dilutive grant funding is an important capital source for early-stage startups, yet it can be mystifying for founders attempting to navigate the proposal development process on their own. Lisa is skilled at writing, editing, budgeting, and at creating systems and supports to guide others through the process. She is an excellent fit for MERC and it is a pleasure to recommend her.

Sincerely,

Sergio Ribeiro, MBA
Co-Founder & CEO
