

To Whom It May Concern:

I am pleased to provide a professional reference for Tomoko Tabuchi Morin, Ph.D., based on her consulting work with BoundlessDx.

Tomoko has supported our biomedical research and product-development efforts across several areas, including scientific data analysis, algorithm and software development, literature research, biomarker evaluation, and AI-assisted diagnostic applications. She has helped organize complex scientific information into structured, practical resources that support research, interpretation, and product-development decisions.

Tomoko brings strong experience in biomarker discovery, biomedical data science, scientific data curation, and evidence-based interpretation. She has an excellent ability to understand complex biological and technical questions and translate them into clear, useful deliverables for both scientific and development teams.

She is thoughtful, dependable, collaborative, and genuinely pleasant to work with. She communicates clearly, works independently, and consistently approaches projects with scientific rigor, attention to detail, and a practical understanding of client needs.

I am happy to recommend Tomoko for consulting engagements involving biomedical data curation and analysis, biomarker research, scientific interpretation, literature review, algorithm development, and related R&D support.

Sincerely,

A handwritten signature in black ink that reads "Joshua Hayward". The script is fluid and cursive, with the first letters of each word being capitalized and prominent.

Josh Hayward
