Dear Brian,

I have been asked by Lise Laurin, CEO of EarthShift Global to convey a letter of support and endorsement for ESG as a MERC Consultant. In fact, I am very pleased to offer my strongest voice of support and endorsement for Lise and her amazing team.

By way of background, EarthShift performed a screening level LCA for SeaChange in 2022. This study enabled SeaChange to show potential investors the potential greenhouse gas reduction from the use of its Bio-Eco-Hybrid fuel. In addition, they shared significant insights with us that will enable us to continue to reduce our impacts over time.

In addition to the greenhouse gas impacts, EarthShift also included other environmental impacts to ensure that we were not shifting the environmental burden from global warming to another area, such as water scarcity or human health impacts. The company continues to support us as we journey through our funding stages.

With the appropriate cautions (it is a screening level LCA) we have shared this study in key discussions both in the U.S. and in Europe. Importantly, because of the methodology and attention to detail, especially the considerations noted in the paragraph above, the study was very well received.

Brian, please convey this letter with ESG's particulars to the MERC team at MTI. There is no question that they will serve MTI/MERC clients very well.

Thank you & Cheers,

Geoff
